

Contents

Preface	ix
Contributors	xiii
1. Weather prediction <i>Joseph J. Tribbia</i>	1
1. History and introduction	1
2. The modern era	5
3. Finite predictability	8
4. The future	12
2. Forecast verification <i>Allan H. Murphy</i>	19
1. Introduction	19
2. Conceptual and methodological framework	21
3. Absolute verification: methods and applications	38
4. Comparative verification: methods and applications	55
5. Other methods and measures	64
6. Forecast quality and forecast value	67
7. Conclusion	70
3. The value of weather information <i>Stanley R. Johnson and Matthew T. Holt</i>	75
1. Introduction	75
2. Economics and the value of information	77
3. Review of selected value-of-information studies	88
4. Valuation puzzles	98
5. Concluding observations	103
4. Forecast value: prescriptive decision studies <i>Daniel S. Wilks</i>	109
1. Introduction	109
2. Case study attributes	112
3. Case study tabulations	124
4. Concluding remarks	140

5. Forecast value: descriptive decision studies	
<i>Thomas R. Stewart</i>	147
1. Introduction	147
2. Comparison of descriptive and prescriptive studies	147
3. Examples of descriptive studies	156
4. Factors that affect differences between descriptive and prescriptive models	168
5. Overview of descriptive modeling methods	171
6. Conclusion	173
6. Forecast value: prototype decision-making models <i>Richard W. Katz and Allan H. Murphy</i>	183
1. Introduction	183
2. Concepts	184
3. Prototype decision-making models	190
4. Extensions	206
5. Implications	213
Appendix: Stochastic dynamic programming	214
Index	219
