1	Introduction	1
2	The governing systems of equations	6
	2.1 The basic equations	6
	2.2 Reynolds' equations: separating unresolved turbulence effects	7
	2.3 Approximations to the equations	10
3	Numerical solutions to the equations	17
	3.1 Overview of basic concepts	17
	3.2 Numerical frameworks	23
	3.3 Finite-difference methods	51
	3.4 Effects of the numerical approximations	58
	3.5 Lateral-boundary conditions	96
	3.6 Upper-boundary conditions	114
	3.7 Conservation issues	116
	3.8 Practical summary of the process for setting up a model	116
4	Physical-process parameterizations	119
	4.1 Background	119
	4.2 Cloud microphysics parameterizations	121
	4.3 Convective parameterizations	129
	4.4 Turbulence, or boundary-layer, parameterizations	140
	4.5 Radiation parameterizations	155
	4.6 Stochastic parameterizations	166
	4.7 Cloud-cover, or cloudiness, parameterizations	166
5	Modeling surface processes	171
	5.1 Background	171
	5.2 Land-surface processes that must be modeled	172
	5.3 Ocean or lake processes that must be modeled	185
	5.4 Modeling surface and subsurface processes over land	187
